The true steel alternative option

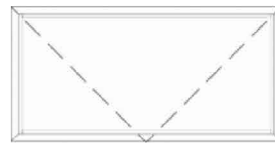

Our Steel Look awning and hopper windows retain many of the features and aesthetics of the old original steel windows. Narrow 2 1/4" frame depth, the beveled glass stop and 3/4" SDL beveled muntin that simulate the look of original "putty" glazed windows combine to produce a unique offering unmatched in the industry. We also offer as casements and fixed configurations.

Muntins

Use muntin to create interest or fit particular architectural designs. Our T225 awning/hopper windows can be ordered with custom grid pattern in either SDL or TDL option.
